Personal Profile

A second-year Artificial Intelligence student at the University of Edinburgh with a solid programming foundation. Proficient in Python and Java, with substantial practical experience gained through academic projects and self-directed learning. Enthusiastic about exploring new technologies, with a focus on integrating theoretical knowledge with practical application. A quick learner who thrives in project-based environments, possessing strong teamwork and problem-solving skills. Eager to further enhance professional capabilities through practical experience.

Education

University of Edinburgh | BSc Artificial Intelligence

September 2024 -- Present

- First Year Average: 92.5%
- Relevant Coursework:
 - Object-Oriented Programming (92%) • Introduction to Computation (100%)
 - Linear Algebra (98%) • Algebra and Calculus (100%)

Bernardino Machado Secondary School (Portugal) | Graduated 2024

- A* Grades: Mathematics, Computer Applications, Physics
- Honors: "Best Student" Award for three consecutive years
- Extracurricular Activities: Participated in cross-cultural exchange programs, developing teamwork and leadership skills

Project Experience

Haskell Sequential Calculus System

- Implemented symbolic logic rule derivation using functional programming.

Harvard CS50 Self-Study Project

- Gained proficiency in memory management and debugging techniques through C programming practice.

Java Maze Puzzle Game

- Developed a keyboard-controlled graphical interface game, reinforcing core concepts including loops, arrays, and GUI basics.

EVE Transport Cost Estimation System

- Designed a console application supporting data validation and cost calculation for land, sea, and air vehicles.

Verb Past Tense Neural Network Replication

- Reconstructed the classic Rumelhart & McClelland (1985) model to simulate English verb inflection patterns.

Visual System Simulation Experiment

- Simulated neuronal spatial filtering mechanisms using Python weight

matrices.Functional Programming Art Competition

- Collaborated in a team to generate algorithmic art using Haskell.

Skills

Programming Languages: Python, Java, C, Haskell

Development Tools: VS Code, IntelliJ, PyCharm, Linux

Data Analysis: NumPy, Pandas, Matplotlib, Jupyter Notebook

Soft Skills: Teamwork, Problem-Solving, Time Management, Detail-Oriented
